NEDO human cDNA sequencing project supported by Ministry of

Economy, Trade and Industry of Japan; CDNA full insert sequencing:

Research Association for Biotechnology (RAB); cDNA library

construction: Helix Research Institute (HRI) (supported by Japan

Key Technology Center etc.); 5- s 3-end one pass sequencing: RAB,

HRI, and Biotechnology Center, National Institute of Technology and

Evaluation; clone selection for full insert sequencing: HRI and

RAB; annotation: HRI and RAB.

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Research, 320 Charles Street, Cambridge, MA 02141, USA
On Aug 21, 2002 this sequence version replaced gi:17060568.
All repeats were identified using RepeatMasker:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                          Sequencing vector: Plasmid; n/a; 100% of reads Sequencing vector: Plasmid; n/a; 100% of reads Chemistry: Dye-terminator Big Dye; 100% of reads Assembly program: Phrap; version 0.960731 Consensus quality: 173992 bases at least Q40 Consensus quality: 177994 bases at least Q30 Consensus quality: 180012 bases at least Q30 Insert size: 168000; agarose-fp Insert size: 181269; sum-of-contigs Quality coverage: 7.1 in Q20 bases; sum-of-contigs Quality coverage: 6.6 in Q20 bases; sum-of-contigs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             NOTE: This is a 'working draft' sequence. It currently consists of 43 contigs. The true order of the pieces is not known and their order in this sequence record is
                                                                                Smit, A.F.A. & Green, P. (1996-1997)

NOTE: This is a 'working draft' sequence. It currently consists of 60 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved. bp in length length bp in length length bp in length length length length ength length length length ength Length unknown length ength ength ength length gap of unknown ll contig of 1176 by gap of unknown ll contig of 1380 gap of unknown ll contig of 1628 by of 1928 I unknown 1 of 2876 k unknown 1 of 1809 b unknown of 1720 h unknown of 1215 hunknown of 1235 h unknown of 1493 h unknown J of 1561 h unknown J of 2777 h of 2574 b unknown ] of 2666 b of 1996 l unknown of 3605 k unknown of 1060 l unknown of 1555 l unknown of 1955 unknown of 1509 unknown of 1250 unknown of 1739 l unknown of 1502 of 1721 lunknown unknown of 1758 unknown of 1974 of 2027 unknown gap of unknown contig of 1223 unknown unknown unknown unknown 1914 unknown of 1221 of oţ ō contig of οţ ot ō ō oţ contig contig gap of contig contig contig contig gap of contig gap of gap of gap of contig contig gap of contig contig gap of contig contig gap of gap of contig contig contig contig contiq gap of ö gap of gap of gap of gap of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         NOTE: This is a 'working draft' sequence. It currently consists of 25 contigs. The true order of the pieces is not known and their order in this sequence record is

COMMENT

```
arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                             * NOTE: This is a 'working draft' sequence. It currently consists of 31 contigs. The true order of the pieces is not known and their order in this sequence record is
  Sequencing vector: plasmid; 30% Chemistry: Dye-primer ET; 70% of reads Chemistry: Dye-primer ET; 70% of reads Assembly program: Phrap; version 0.990319

On Oct 24, 2001 this sequence version replaced gi:15021052.

During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.
This sequence was finished as follows unless otherwise noted: all
regions were either dubble-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality)=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one plasmid subclone or more than one MI3 subclone; and the
assembly was confirmed by restriction digest. The following
abbreviations are used to associate primary accession numbers given
in the feature table with their source databases: Em: EMBL; Sw:,
SWISSPROT; Tr:, TREMBL: WP:, WORMPEP; Information on the WORMPEP
HISTORY CONDERVIATION OF TREED O
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 9, constructed by the Sanger Centre Chromosome 9 Mapping Group.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   linear PRI 21-OCT-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AL592438 42513 bp DNA linear PRI 21-OCT-200.
Human DNA sequence from clone RP11-187G6 on chromosome 9, complete
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    IMPORTANT: The sequence is not the entire insert of clone RP11-187G6 It may be shorter because we sequence overlapping sections only once, except for a short overlap.

The true right end of clone RP11-187G6 is at 42513 in this sequence. The true left end of clone RP11-9911 is at 3799 in this sequence. The true right end of clone RP11-161E22 is at 2000 in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Homo sapiens

NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

NOTE: This is a "working draft' sequence. It currently consists of 48 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
